Demiryolu Taşımacılığı Derneği

Railway Transport Association

www.dtd.org.tr

Demiryolunun güvenli olması, ağır yük taşımacılığına uygunluğu, sabit transit süresi, çevreci olması ve hava koşullarından etkilenmemesi demiryolu taşımacılığını üretici ve ihracatçı için etkin bir taşıma modu haline getirmektedir.

The safety of railways, its appropriateness for heavy load transport, fixed transit time, environment friendly nature, and not being influenced by the weather conditions make the railway transport an effective transport channel for the producers and exporters.

Dear Representatives of the Transportation Sector,

Railway Transportation Association (DTD) was founded in 2006 in order to develop the railway transportation which is known to be green and clean type of transportation by taking into account the requirements of our age and of our country and to increase the share of railway transportation in overall transportations in our country.

international railway transportation services by using their own wagons and TCDD wagons, operate wagon manufacturing facilities and ports, engaged in the industry of wagon maintenance and repair and undertake the projects for railway infrastructure construction, maintenance and repair.

We are committed to the mission of elevating the railway transportation to its deserved position as it is considered the transportation mode of future in the world.

Therefore we are striving to expand and develop the railway transportation since its negative impacts to the nature is much lesser as compared to other transportation modes if we take into account the global warming and expected hazards and threats of this development.

logistics such as the Ministry of Transportation, Marine and Communication, the Ministry of Development, the Ministry of European Union, the Ministry of Economy, TCDD General Directorate, Turkish Union of Chambers and Stock Exchanges (TOBB) and Turkish Assembly of Exporters (TIM), we regularly take record of the sector problems and solution offers and monitor the results.

We participated into the preparatory works of the 10th Development Plan encompassing the period 2014-2018 as the representatives of the railway sector. We prepared a report containing the opinions and suggestions of the private sector and made our contribution to the 10th Development Plan.

Values such as fast and reliable transportation, economic solutions and environmental awareness are becoming prominent in the globalized world and these values make the ever developing railway sector indispensible for the future. All members are sharing the common wish to support and increase the share of railway transportation, generations".

We are trying to create a strong non-governmental organization by combining relations with this sector.

We are convinced that railways will enhance competitive edge of Turkey in the world markets and will bring economic and social development.

Therefore in this initiative supported not only with our diligent efforts but also with

We must never forget the fact that the most valuable heritage we could leave behind for our children is a clean and green world.

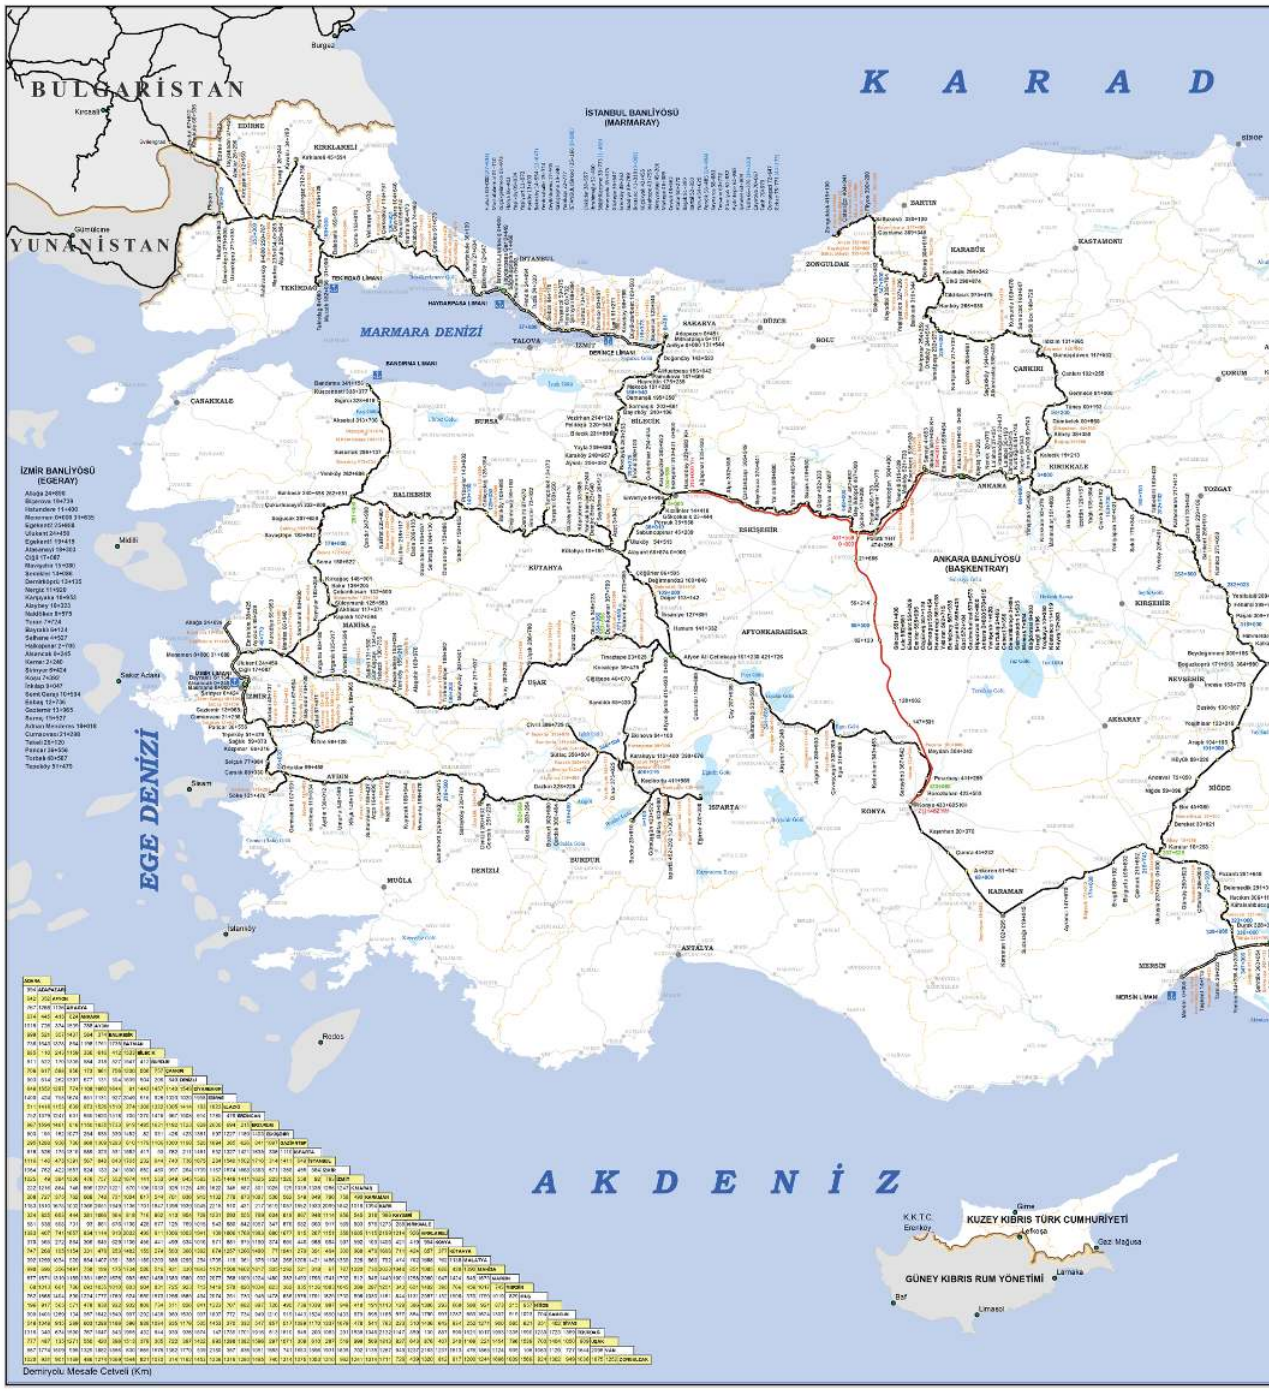

Kind regards,.
